

## NFR007 - Maximum system response time

|               |                                                                                                                                                                                             |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Purpose       | The OCI Conformance Program requires Digital Wallet Providers to report data on average and maximum system response time as described in NFR007 in the Digital Wallet Conformance Criteria. |
| OCI Benchmark | Average total time for VP generation and verification API calls<br>= 1500 ms<br>Maximum total time for VP generation and verification API calls<br>= 3000 ms                                |
| References    | <a href="#">OCI Digital Wallet Conformance Criteria</a><br><a href="#">OCI Conformance Program</a>                                                                                          |

## Performance Data

| Reporting Month | Maximum system response time | Average system response time |
|-----------------|------------------------------|------------------------------|
| 03 2025         | 1647 ms                      | 850 ms                       |
| 04 2025         | 1006 ms                      | 502 ms                       |
| 05 2025         | 857 ms                       | 352 ms                       |

*The reported maximum system response time is the sum of both generation and verification API calls and represents the 95% confidence level based on a 50% sampling rate.*

*The reported average system response time is the sum of both generation and verification API calls based on a 50% sampling rate.*
